

## Vaccination Requirements for Boarding Your Pet at Jagersbo Kennels

### Dogs

#### 1. Canine Influenza Vaccine- H3N8 is recommended before boarding

##### Canine Influenza- H3N8

Since this is a new disease, all dogs, regardless of age or breed, are susceptible to infection and have no immunity. Dogs with the mild form of disease have a soft productive cough for 10-30 days or a non-productive cough similar to canine cough. A thick nasal discharge may also develop in dogs with the mild form of disease. Dogs with the severe form of disease develop high fevers (104-106 degrees F) and develop pneumonia. Please talk with your veterinarian about your dog's need for this vaccine prior to boarding.

#### 2. DHLPP

- a. Distemper
- b. Canine Hepatitis
- c. Leptospirosis
- d. Parainfluenza
- e. Canine Parvovirus

#### 3. Bordetella

#### 4. Rabies

An annual negative fecal test is also required for boarding.

### Cats

#### 1. FVRCP

- a. Feline Viral Rhinotracheitis
- b. Chlamydia
- c. Calici Virus
- d. Panleukopenia

#### 2. Feline Leukemia

#### 3. Rabies

A negative FIV/FelV test is required for boarding.\*

\* Many veterinarians differ on the requirement for this vaccination for boarding. We can make arrangements for some of these cases, as long as your veterinarian will provide a letter supporting this point of view.
